

Fabrics using Recycled Yarn

Due to consumer demands for products that offer sustainable environmental choices Encore fabrics have been developed in conjunction with leading yarn suppliers. The recycling of existing products prevents their disposal to land fill.

These eco-friendly textiles are sustainable and functional while being kinder on our earth. Encore is the perfect choice where quality, performance and low environmental impact matter. A minimum of 40% recycled yarn is required to receive the Encore endorsement, and many of our qualities have an even higher percentage than required. Encore branded products deliver quality and performance without the impact.

Diverts waste from landfill and oceans - Our recycled polyester yarn suppliers source their polyester from post consumer recycled bottle waste and post industry yarn waste. Our recycled wool reuses wool from fashion garments and other woollen textiles.

Better for the climate - Recycled yarns lessens our dependence on petroleum as a source of raw materials and reduces green house gases. All our recycled yarns are certifiably sustainable and traceable.
